COOL, COMFORTABLE SLEEP

Tencel Fiber - Tencel has moisture-regulating properties, meaning it can absorb moisture from the skin and release it into the air, making it highly breathable and suitable for hot climates. Tencel fibers also have natural antimicrobial properties, making them resistant to bacteria and dust mites. The mattress surface stays fresh and hygienic for longer. In summary, Tencel is a modern textile fiber that offers a remarkable balance of comfort, durability, and environmental friendliness.

ComfortCool™ Gel Memory Foam - A layer of gel-infused memory foam to better conform to the body's contours, providing enhanced support and improved temperature regulation. Memory foam is perfect for contouring to the body's shape and relieving pressure points, while the infused gel helps enhance its ability to regulate heat and provide support.

PRECISION SUPPORT SYSTEM

T2 Pocketed Coil® Technology - An exclusive dual-wire coil design, pioneered by Beautyrest and located at the center of the mattress, providing extra support where you need it most. It helps contour to the body for better lumbar support, relieves pressure points, and isolates motion for peaceful sleep. The individually wrapped pocket coil is pre-compressed to enhance motion transfer while delivering consistent support throughout the night.

ADVANCED PRESSURE RELIEF

AirFeel® Foam - High-quality firm foam with an open-cell structure that helps provide air circulation and durability throughout the mattress's lifespan. This foam is available in various thicknesses and densities to achieve different comfort levels and profiles.
