EURO TOP MEDIUM FIRM

COOL, COMFORTABLE SLEEP

Thermoregulating Fabric - Designed to regulate body temperature during sleep. It is made from innovative fibres that allow better air circulation and effective moisture management. This type of fabric helps maintain a comfortable temperature throughout the night, absorbing excess heat when the body is too hot and releasing it when the body is too cold. This helps to create a more pleasant sleeping environment, conducive to restful sleep.

Gel-Infused Fibres - This fibre draws heat away from the sleeping surface to help maintain an ideal sleeping temperature.

PREMIUM SUPPORT SYSTEM

1,000 Beautyrest® Pocketed Coils - Hundreds of individually wrapped coils that independently adjust to the weight and shape of your body, giving you unrivalled support and motion separation for a peaceful night's sleep.

High-Density Foam Edge - This durable support edge allows full use of the sleeping surface without a rolling sensation on the edges. The high-density foam on the support edge helps prevent edge roll-off.

ADVANCED PRESSURE RELIEF

ComfortCool™ Gel Foam - A layer of gel-infused foam that provides pressure relieving comfort and temperature management properties for luxurious sleep all night long.
